

## **Supplemental Materials**

### **DNA Methylation Modifies Urine Biomarker Levels in 1,6-Hexamethylene Diisocyanate (HDI) Exposed Workers: A Pilot Study**

LA Nylander-French, MC Wu, JE French, J Boyer, L Smeester, AP Sanders, RC Fry

#### **Supplemental Material: Tables**

Supplemental Material, Table 1: Model 2: Genic and intergenic sequences of the 30 differentially methylated CpGs statistically associated (FDR <0.05) with HDI inhalation and skin exposure in the 20 automotive spray-painters..... 2

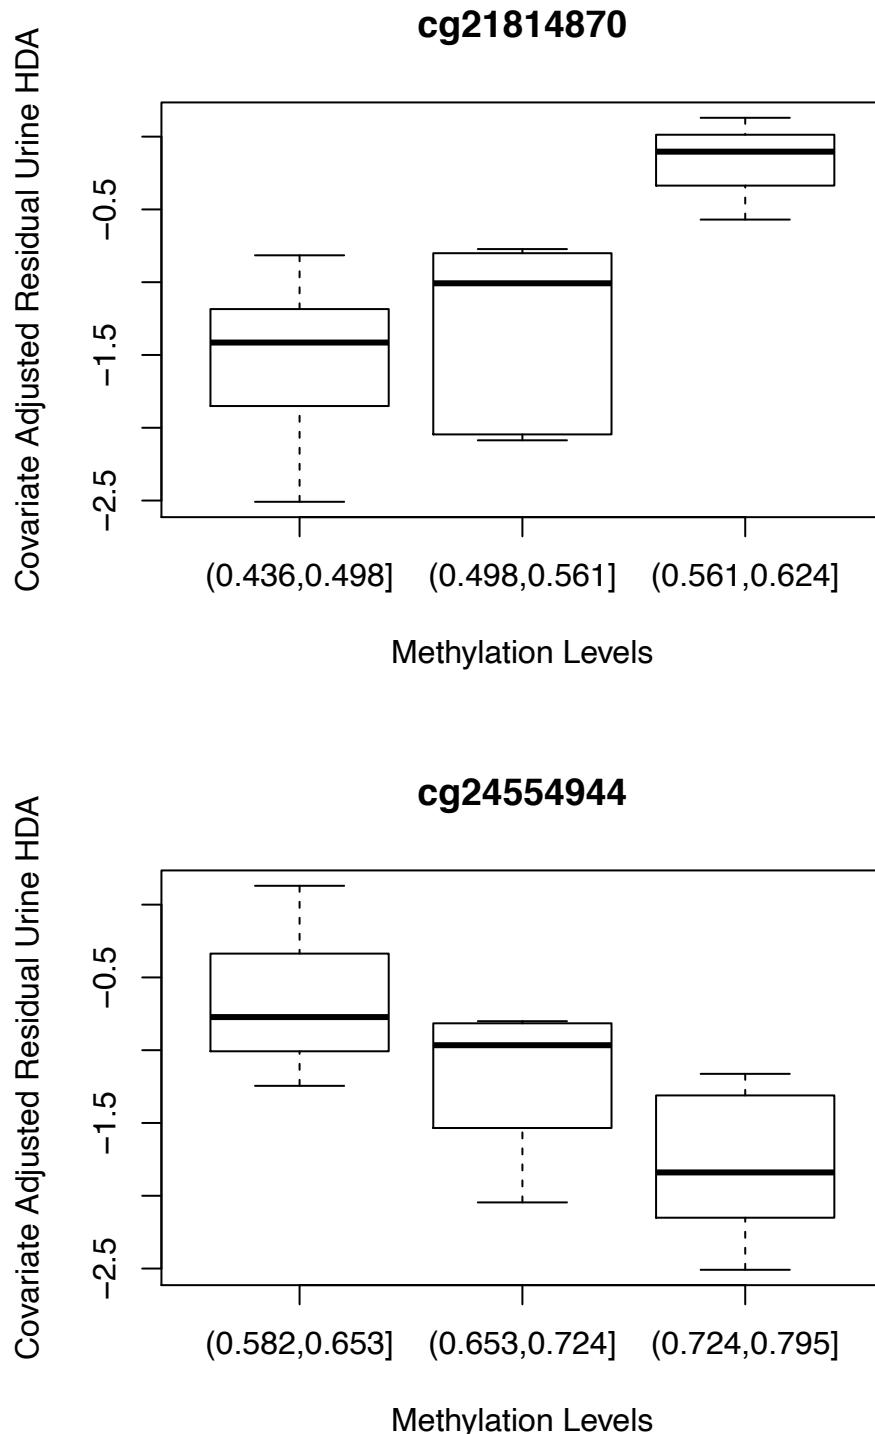

#### **Supplemental Material: Figures**

Supplemental Material, Figure 1: DNA methylation vs. creatinine adjusted urinary HDA levels for the two most significant CpGs in the 20 automotive spray-painters. Creatinine adjusted urinary HDA levels in the figure have been adjusted for age, ethnicity, and smoking status..... 3

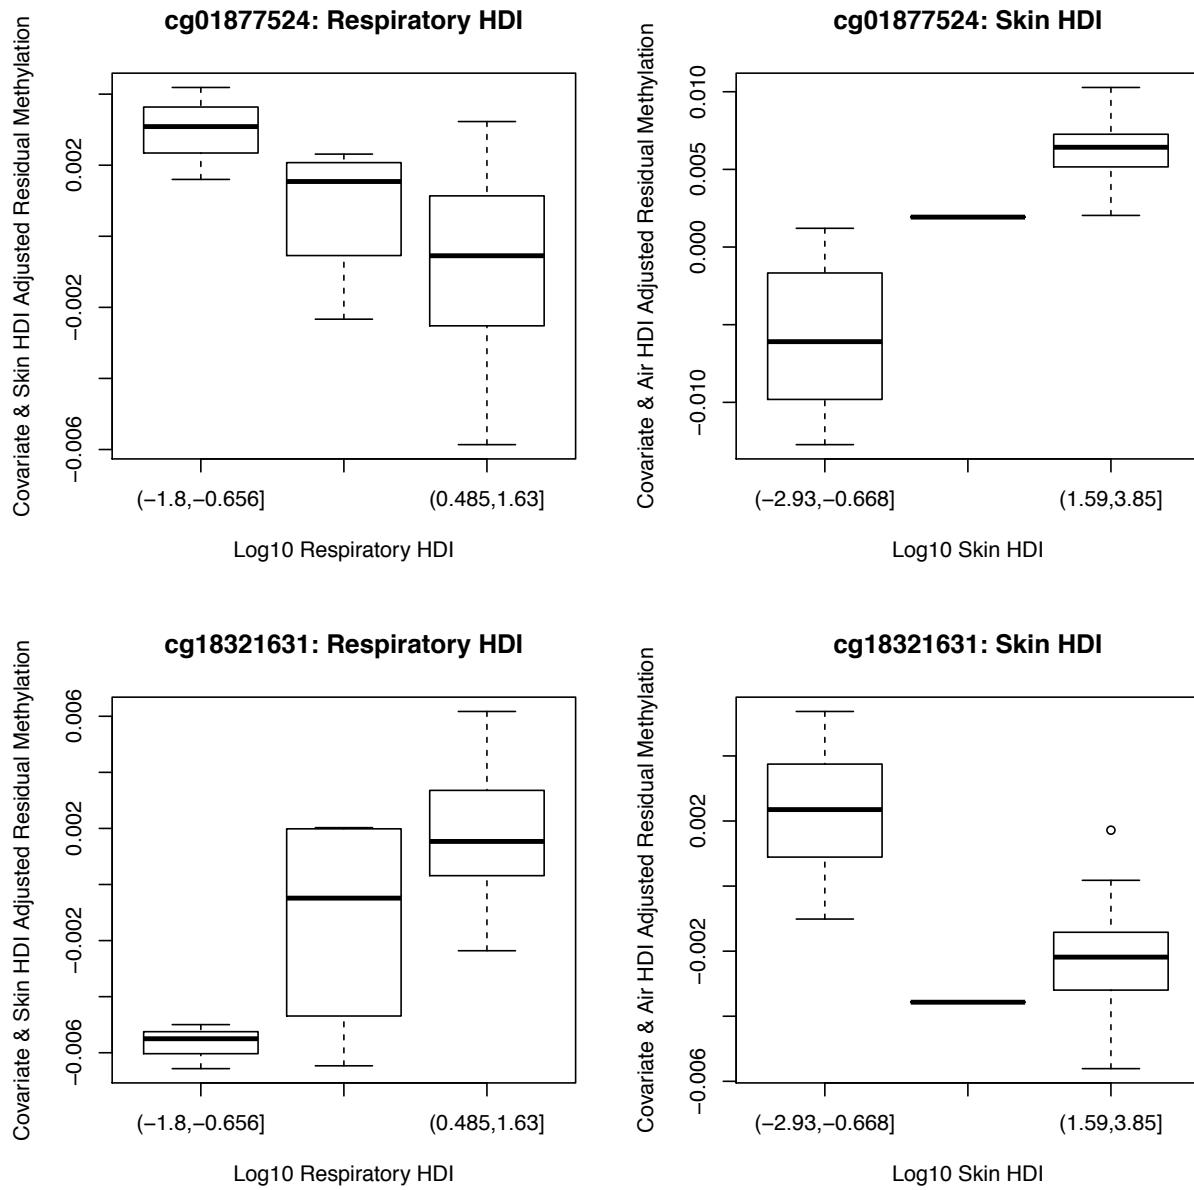

Supplemental Material, Figure 2: DNA methylation vs. HDI levels measured in the breathing zone or in the skin for the two most significant CpGs in the 20 automotive spray-painters. DNA methylation levels in the figure have been adjusted for age, ethnicity, and smoking status..... 4

**Supplemental Table 1.** Model 2: Genic and intergenic sequences of the 30 differentially methylated CpGs statistically associated (FDR <0.05) with HDI inhalation and skin exposure in the 20 automotive spray-painters.

**Supplemental Figure 1.** DNA methylation vs. creatinine adjusted urinary HDA levels for the two most significant CpGs in the 20 automotive spray-painters. Creatinine adjusted urinary HDA levels in the figure have been adjusted for age, ethnicity, and smoking status.

**Supplemental Figure 2.** DNA methylation *vs.* HDI levels measured in the breathing zone or in the skin for the two most significant CpGs in the 20 automotive spray-painters. DNA methylation levels in the figures have been adjusted for age, ethnicity, and smoking status.
